

GOVCON GIANTS · INTERNAL STRATEGY

Winning the Public Sector

Introducing government funding for our company — the smart model (Anduril), the awardees who look like us, and our plan to sell Mindy to government

REVENUE TRACKS

PART 1

A new avenue for us: government funding

Something we've never tapped

We've never pursued funding — here's how to do it right

NEW FOR US

SBIR, OTAs, and direct sales are open to us. The question isn't *whether* — it's **how**, so funding fuels us without owning us. Anduril answered this.

The smart way (Anduril)

Build the product, sell it fixed-price to an end-user with a budget, use SBIR/OTA only to **scale** what already works. Funding = fuel.

The way to avoid

Becoming **grant-dependent** — getting paid to do R&D on spec. Slow, cost-plus incentives, years before revenue. We skip this entirely.

Build first → sell fixed-price → scale with SBIR Phase III

ANDURIL

Anduril's border business runs on an **SBIR Phase III IDIQ** (~\$2B ceiling). They used the lever — they just didn't *depend* on the grant.

PART 2

The Air Force already funds companies like us

The precedent

AFWERX/AF awardees doing what we do

REAL AWARDS

Company	Award	What they do (≈ Mindy)
Eudia	\$1.25M AFWERX D2P2	AI for DAF procurement / contract review
Oliver Wyman	SSC SBIR Phase III	Business-intelligence tool for Space Systems Command
Outside Analytics — "DAVE"	\$215M AF SBIR Phase III	Analytics & visualization ecosystem (the scale proof)
Certus Core	AFWERX Open Topic	Pure-software knowledge-graph data platform

AFWERX funds AI / analytics / contractor-data software. **We sit squarely in that lane.**

Mindy is built. We have 3 government end-users with real needs. That's the whole battle.

The hard part of the playbook — a finished product + an end-user with budget — we already have.

Anduril spent \$1B to get there. We're a SaaS — same motion, our scale.

PART 3

Our public-sector strategy

Two tracks

Sell direct now · one SBIR for the key

THE PLAN

Track 1 — Sell direct

Revenue now. The 3 contacts are buyers, not grant sponsors. Commercial-item pilots: micro-purchase (\$15K) → simplified acquisition (\$350K).

Track 2 — One AFWERX SBIR

The strategic key. Land one SBIR → unlock Phase III sole-source across every agency. Target an AF office. Parallel, not the income.

The close, every time: don't ask for a contract — ask for a no-cost pilot on their data.

3 warm contacts → 3 live prototypes

ALREADY BUILT

DISA

Vehicle Expiry Watch — auto-notify the incumbent before IDIQ/IDV expiry. Replaces manual spreadsheets.

Navy OSBP

SMB Sourcing — thousands of capable small businesses, ranked by who's won the work. Exportable.

Army MICC

MRR Generator — auto-drafts the official Army Market Research Report .docx from real award data.

One engine, three jobs — the same PSC-scored search powers Navy sourcing and the Army MRR.

Each prototype is honest about what it doesn't do — that's why a CO trusts it.

DISA sends nothing live until approved · OSBP shows "won set-aside work," not a faked cert · MICC brackets the IGE & signatures.

Never overclaim an authorization we don't have.

Who does what next

THIS WEEK

Owner	Action
Eric	Run the 3 gov demos (DISA verifying first) · approve advisor comp
FT hire (to recruit)	Own gov pilots → commercial buys · partnerships funnel · grant calendar
Ops	Book the NAPEX booth NOW — \$1,500, Aug 16–20, first-come
Product	Seed Ashley's real sourcing codes · keep prototypes warm

Deadlines: NAPEX booth · DISA verification · DoD SBIR 26.3 (Jun 24) · MBDA Rural BC (Jun 29)

The 6-month scoreboard

GOALS

3

Signed pilots / evals

1

Paid license

10+

NAPEX director meetings

2

Grant applications

3 → 💰

Prototypes → paid pilots

2

Post-NAPEX pilots

1

AFWERX end-user secured

Build first. Sell direct. Use one SBIR for the key. Be honest. Land pilots, then expand.

The proven defense-tech playbook — at our scale, starting now.
