

GovCon Giants / GovCon Edu — Company & Capability Summary

Prime applicant, DLA SBIR DLA26BZ03-NV012 — AI-Powered Evaluation of Vendor Economic Dependency

GovCon Giants / GovCon Edu · getmindy.ai · govcongiants.com Eric Coffie, Founder · eric@govcongiants.com · Office 508-290-6692 · Direct 786-208-2071

Who we are

GovCon Giants is a federal-contracting intelligence company, **in business since 2017** — one of the most recognized names in the government-contracting community through its education, media, and training reach. Our AI platform, **Mindy** (getmindy.ai), delivers **production grounded large-language-model (LLM) and retrieval-augmented generation (RAG)** over authoritative federal data — with citation-backed answers, hallucination controls, and bounded agentic workflows.

On this SBIR, we are the prime. GovCon Edu — our for-profit small-business entity (SAM active, DSIP ready) — primes the award, brings the AI/data engineering, writes the proposal, and owns the registration / ITAR / CMMC mechanics. **We are seeking one teaming partner for the federal audit-readiness standard (SFFAS 47)** — the single piece outside our lane.

Prime applicant	GovCon Edu (for-profit small business) — SAM active, DSIP ready
Parent brand / platform	GovCon Giants (in business since 2017) · Mindy AI platform (since 2024)
What we bring	The AI/data engine, the proposal, and all SBIR prime mechanics
What we're seeking	One partner for SFFAS-47 / federal agency audit-readiness expertise
Scale	~1,900 users/customers; 317,000+ contractor records; 88,000+ live federal solicitations
Data sources	USASpending, SAM.gov, SEC EDGAR — authoritative federal records
Product type	Commercial item (FAR Part 12)
Contact	Eric Coffie, Founder · eric@govcongiants.com · 508-290-6692

The opportunity

DLA SBIR topic DLA26BZ03-NV012 — *AI-Powered Tool for Automated Evaluation of Vendor Economic Dependency*. Phase I **100K/12mo** → *Phase II* * **1M / 24 mo** → Phase III DoD-wide transition. **Closes 22 July 2026**. The customer (DLA) is already attached.

DLA wants an AI tool that automatically assesses how economically dependent each vendor is on the government — identifying **related parties and concentration risk per SFFAS 47** to support audit readiness and supply-chain resilience. Today this is manual and can't scale across thousands of vendors and millions of transactions.

What we bring — built and proven

- **The data engine.** Mindy already computes **federal obligated dollars per vendor by UEI** across the entire USASpending universe (317K contractors) — the dependency *numerator* is a production capability, not a research risk. (*It returns McKesson's \$84B and Pfizer's \$28B in federal obligations instantly.*)
- **The public-financial join.** Built to ingest SEC EDGAR 10-K revenue + SAM.gov — the exact sources the topic names. Dependency % = federal \$ ÷ total revenue.
- **Provenance by default.** Every figure carries its source and as-of date — the *auditable, traceable* results the topic and SFFAS 47 require.
- **The SBIR vehicle and delivery.** GovCon Edu primes, writes the proposal, and owns registration / ITAR / CMMC. The AI engineering is entirely ours — no IT or development partner needed.

The AI capability behind it (production, not a prototype)

- **Grounding & citations** — every answer cites its source record and as-of date; answers that can't be grounded **abstain rather than fabricate**.
- **Hallucination controls** — retrieval-only context, citation enforcement, confidence gating, and an LLM-as-judge fact-check on high-stakes output.
- **Governed agentic automation** — bounded/scoped permissions, reversible operations, and full audit traceability on every autonomous action.

- **Security & sustainment** — least-privilege access, encryption in transit and at rest, full audit logging, and a provider-agnostic model fallback (no single-vendor lock-in).

What we're seeking from a partner

Federal-agency audit-readiness / SFFAS-47 expertise. Mindy is market-intelligence, not audit. We need a partner who knows **agency-side financial reporting** (FIAR, FASAB, SFFAS 47) to:

- Define the economic-dependency / related-party **criterion** per SFFAS 47,
- Anchor the proposal in DLA's audit-readiness language, and
- Co-author the compliance memo.

*This is the **agency** audit side — helping DLA audit its own books — not contractor-side DCAA/FAR compliance.*

The lift is light. A **named advisor** is enough to make Phase I credible; you don't have to build anything. A subcontractor role is available if you want more. We prime, we bring the tech, we write the proposal — you bring the standard.

Relevant experience (commercial — FAR Part 12)

Mindy (getmindy.ai) — a deployed commercial AI platform delivering grounded LLM/RAG and bounded agentic workflows over authoritative federal data. Built by GovCon Giants (in business since 2017), the platform has been in production since 2024 (the product suite — Federal Market Assassin, Federal Contractor Database, Recompete Tracker, Opportunity Hunter — unified into Mindy), serving ~1,900 users/customers today. *Commercial item — no CPARS.*
