

## AI for Federal Vendor Economic Dependency — DLA SBIR Partner Brief

---

**The opportunity:** DLA SBIR topic **DLA26BZ03-NV012** — *AI-Powered Tool for Automated Evaluation of Vendor Economic Dependency*. Phase I **100K/12mo** → *Phase II* → *Phase III* transitions DoD-wide. **Closes 22 July 2026**. Customer (DLA) is already attached. **Applicant:** GovCon Edu (for-profit small business) — we prime. **We're seeking one teaming partner.**

### What DLA wants

---

An AI tool that automatically assesses how economically dependent each DLA vendor is on the government — identifying **related parties and concentration risk per SFFAS 47** to support audit readiness and supply-chain resilience. Today this is manual and can't scale across thousands of vendors and millions of transactions.

The tool must: pull a vendor universe from contract data → retrieve public financials (SEC EDGAR, 10-Ks, SAM.gov) → compute an economic-dependency criterion (e.g., % of a vendor's revenue from DLA) → flag related parties and risk by contract type → produce **auditable, traceable** results.

### ✓ What WE bring (built and proven)

---

- **The data engine.** Our platform (Mindy) already computes **federal obligated \$ per vendor by UEI** across the entire USASpending universe (317K contractors) — the dependency *numerator* is a production capability, not a research risk. (*e.g., it returns McKesson's \$84B / Pfizer's \$28B in federal obligations instantly.*)
- **The public-financial join.** Built to ingest SEC EDGAR 10-K revenue + SAM.gov — the exact sources the topic names. Dependency % = federal \$ ÷ total revenue.
- **Provenance by default.** Every figure carries its source + as-of date — the "auditable, traceable" the topic and SFFAS 47 require.
- **The SBIR vehicle.** GovCon Edu is a registered for-profit small business; SAM active, DSIP ready. We prime, write the proposal, and own the registration/ITAR/CMMC mechanics.

### □ What WE NEED from a partner (this is the ask)

---

**Federal-agency audit-readiness / SFFAS-47 expertise.** Mindy is market-intelligence, not audit. We need a partner who knows **agency-side financial reporting** (FIAR, FASAB, SFFAS 47) to:

- Define the economic-dependency / related-party **criterion** per SFFAS 47,
- Anchor the proposal in DLA's audit-readiness language, and
- Co-author the compliance memo.

*Note: this is the **agency** audit side (helping DLA audit its own books), not contractor-side DCAA/FAR compliance.*

### The deal

---

- **Light lift for you.** A **named advisor** is enough to make Phase I credible — you don't have to build anything. (Subcontractor role available if you want more.)
- **Real upside.** \$100K Phase I → \$1M Phase II → Phase III sole-source pathway, DoD-wide.
- **Clean structure.** We bring the tech + prime the SBIR; you bring the standard. No IT/dev partner needed — the engineering is ours.
- **Fast.** Closes 22 July 2026 — we're moving now.

### Phase I in one breath

---

A feasibility study: take sample DLA contract data → resolve the vendor universe → pull public financials → apply the SFFAS-47 dependency criterion → deliver a **proof-of-concept tool + a labeled "golden dataset" + a Phase II plan**. Not production — proving the concept works on real data.
